

Stock management

This is the back office for managing your stock including inventories, suppliers, and warehouses. The inventories are divided into three different lists by the system, which is as follows:

- Active Listing
- Inactive Listing
- Out of Stock

Image	SKU	Title	Condition	Price (excl. tax)	Quantity	Option
	ab	Sapiente ex tempora libero veniam qui.	Refurbished	\$433.87	52	
	ad	Dignissimos qui est incidunt modi enim.	New	\$328.71	37	

Several features for stock management are there with IndoMarche that are:

- Suppliers
- Warehouse
- Add Stock
- Bulk Upload

Suppliers

All of the supplier profiles can be set up in the system with this module. With each new addition in the inventory, you will get access to select the supplier for the same.

STOCK >> SUPPLIERS

Warehouses

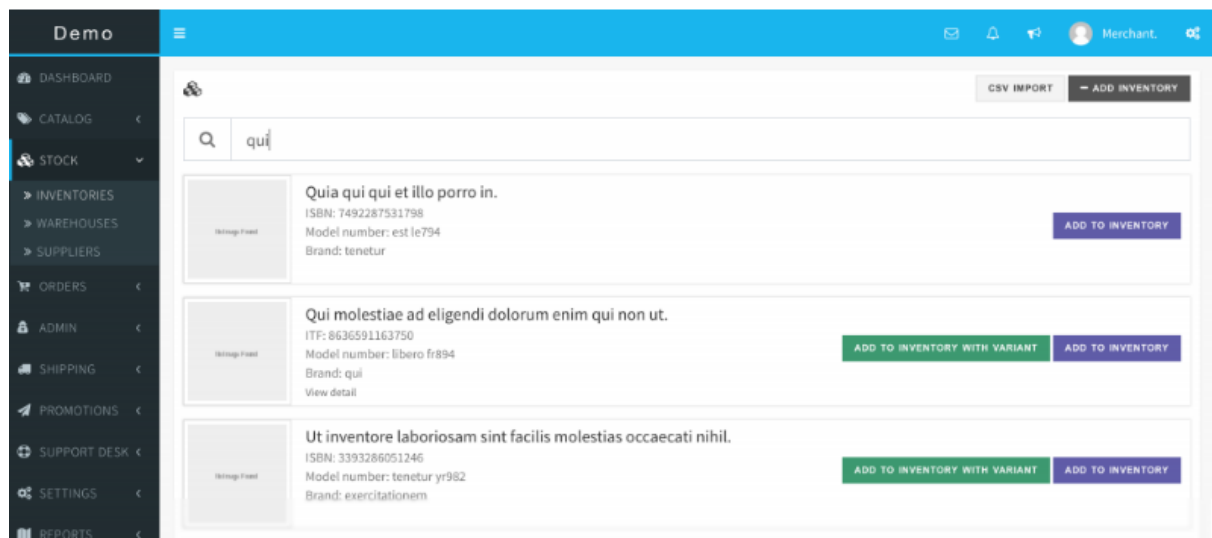

All of the warehouses available with you can be added to the system. With each product's addition in the inventory, you can select the warehouse from where the product will be shipped.

STOCK >> WAREHOUSE

Add Stock

To add a product to your stock, you must click on the **ADD INVENTORY** button. If there is a possibility to create a variant in the inventory, then **ADD TO INVENTORY WITH VARIANT** option will be displayed, otherwise, **ADD TO INVENTORY** button is shown. You can select the right option from the available ones that fit best for your needs. Be honest with everything thinking from a buyer's perspective.

STOCK >> INVENTORIES >> ADD INVENTORY

If you cannot find a product, then it must be unavailable on the marketplace yet. To solve this issue, you can create the product by visiting the **CATALOG PRODUCTS** section and then add the inventory.

Basic Info

This section contains all the information parts that are required for the description of a product. Carefully add the title and listing, as it solely should be enough to give an idea of the product, and then the description must be there with in-depth detailing of the product. It must have everything about the product that the customer might want to know.

The screenshot shows a form titled "Basic Info" with several input fields and dropdown menus. The fields are labeled "TITLE*", "SKU*", "CONDITION*", and "STATUS*". The "TITLE*" field contains the text "Title". The "SKU*" field contains the text "Seller SKU". The "CONDITION*" dropdown menu is set to "New". The "STATUS*" dropdown menu is set to "On sale". Below these fields is a section labeled "KEY FEATURES" with a text area containing the text "Key Features". At the bottom is a section labeled "DESCRIPTION" with a text area containing the text "Start from here".

Images

This is the most crucial part of the product description in your listing. Mostly, the items with a quality image are preferred by the buyers. Also, you can add multiple images of your product taken from different angles to provide every fine detail.

Key Features

It is a feature list expressed as the bullet points and is available at the top of the product description and detailed page. Adding this key feature list is highly recommendable as it helps improve the attraction for the customers. Also, the information in the list must be the main and important ones.

Listing Rules

It is the module that helps to list all the rules related to your stock like the number of products in the stock, the minimum amount of a certain product that a customer can buy, and pricing for the single units. Promotional prices and offers can be provided too for a limited period.

SEO

SEO friendly URL (**SLUG**) is a required field that can be automatically filled by the system itself. These are visible to the customers/ visitors when they visit the product page. With this feature, the marketplace, and eventually the store can directly attract the buyers from **Google**. Hence, this value is recommended to be set for higher customer acquisition.
